

Many students participated in a math intervention program this summer. **The iSucceed MATH** program is a data-driven math intervention solution for students who have not yet mastered the fundamentals in math. An innovative system combining technology & print, this multimedia, multisensory program incorporates the best practices of teacher-directed group instruction, interactive courseware, active practice with games, fact fluency, and one-on-one tutoring. **iSucceed MATH** provides age-appropriate, individualized instruction specifically designed for closing gaps in conceptual understanding.

Students can continue to benefit from this intervention program throughout the 2009-2010 school year, by participating in our after-school **iSucceedMATH** tutoring program offered on Tuesday—Thursday from 2:15-3:15. Teachers will design & monitor a curriculum appropriate for your child's individual needs & students will be scheduled accordingly. Each child is assigned a user identification number & the program can also be accessed from home if you have a computer. The website is: <http://asp.isucceedmath.com/nh/milford>. Parents are responsible for transportation. We would prefer students not take the late bus as they will be unsupervised for 45 minutes.

We have a limited number of student licenses. If you & your child elect to participate in this math intervention program, it is imperative that you both make a serious commitment to consistently participate.
